#### AMSTRAD ACTION P

JUNE '95 ISSUE 117

# 11 DTP - the full story

Appearances are important. How a page looks may determine whether you read it. DTP can make all the difference but which package best suits your needs? Richard Fairhurst keeps you paged.

# 17 Parados on parade

Richard Wildey calls the Parados ROM to stand up straight and be counted and sounds the Last Post for the rank and file CPC operating systems.

Make it big in the world of fonts and DTP with Micro-Design Extra – free!

How can you get into publishing? It's easy! You need your CPC, a printer, a target audience, and something to say. Got all that? Then all you need is a DTP package. Enter our competition and you might even get that for free!

#### On your covertape...

#### **NORTH AND SOUTH**

This American Civil War simulation/arcade game is 'rather wonderful' according to our tape editor. In fact it's so exciting Richard Fairhurst lost sleep and blood battling to get it for you. Oh, and AA awarded it a Mastergame in 1991.

#### **IMAGEPRINT**

Perk up your printouts with this print enhancer utility. Transform your text with a smart sans serif typeface. Customise your current design or create new fonts with the font editor.

#### AMSCENE DIRECTORY

The CPC 'Yellow Pages' only much more environmentally-friendly, of course.

Turn to page 5 now!

#### 3. What's happening What have Simon Forrester's granny

What have Simon Forrester's granny and Bonzo's Scrapyard got to do with the CPC? Is it as tenuous as it seems? And, have you won a copy of BrunWord?

#### 4 Reaction

Regulars

Be famous or provocative for 30 days.

#### 5 Serious action!

North and South – this means war! And battle with dull layouts with Imageprint.

#### 9 Classifieds

Small, but not insignificant, reader ads.

#### 20 Competition!

No need to pay to display! Win one of three copies of MicroDesign Extra!

#### 24 Back issues

Your backup in your hours of need.

#### Serious stuff

#### 10 Basically basic

Twist codes round your little finger.

#### **16 Assembly line**

It's chipper. Improve that old block game.

#### 19 Hardware

Develop your software, hunt POKES...
There's so much you can do with *Hackit*.

#### 21 Techy forum

Richard Fairhurst 'mono' tors your colour printing problems; presents a project to build an A38; and goes shopping.

#### Leisure zone

#### Public image

Donner und Blitzen! It's the return of Rundschlag! Also Brains & Brawn, side B.

#### 8 Cheat mode

From Biff to Wild West Seymour via Chuckie Egg. Keep a plastic bag handy!

#### **15** Further reading

'ate it or love it, your CPC that is, *8BIT* is the fanzine to reckon with. Also, the start of a series of DTP tips.

AA118 on sale: Thursday, 22 June, 1995

ABC 15,168

Member of the Audit Bureau of Circulation

Jul '93 – Jan '94

## What's happening...

#### **8BIT** smart

Brian Watson, founder and editor of 8BIT fanzine (Further reading, AA116, page 9) has announced changes for the multi-format fanzine that's fast finding its feet in the market. It's also been reviewed in this month's Further reading, see page 11.

Due to the increased cost of paper and printing, the cover price will rise from £1 to £1.25. This will be offset by a rise in production quality: a new paper stock making for a heavier, more durable magazine.

Commendably, this quality increase was previously subsidised by the profit

Subscribers will continue to get their issues for the original £1 price tag. Subscribers can also put a small ad in the magazine connecting them with the world of 8-bit users.

made though the launch issues.

However, AA readers can continue to buy 8BIT for £1 per issue. Simply mention you saw this item in AA when you order...

A back issue service is now available for those who have missed the first four issues. They cost £1.25 each (they're reprints, misers). But issue 1 is available free when you order it with another.

As well as the regulars for which the fanzine has become known, issue 5 also contains a hot news scoop (what? – Ed) that we shan't spoil by stealing (Oh, go on – Ed). Oh, ethics be blowed – we've got room (Yay! – Ed). They've just found out that...

Note: don't send cash by post – use cheques or postal orders only. Brian Watson, 8BIT, Harrowden, 39 High Street, Sutton-in-the-isle, Ely, Cambs CB6 2RA.

# In AA1 15 we asked: 'Who wrote the poem beginning Twas brillig and the slithy toves...''? This was Jabberwocky, of course The answer was Charles Dodgson, better known by his pen name, Lewis Carroll. Dave Hall of Stretford wins a copy of the excellent BrunWord WP. Hundreds of you returned your AA Reader Survey questionnaires.

Hundreds of you returned your AA Reader Survey questionnaires We are processing the results right now... Henry Bennett from Kimpton, Sharon Porter from Stoke-on-Trent, and Ray Powell from Sporle, win 10 games each. Thanks to everyone who replied.

#### CompuServe-ice

Those of you who screamed when you received your first Internet access bill will be pleased to hear of CompuServe's new pricing scheme. You get three free hours of unrestricted Internet access per month included in the cost of membership (£6.50/month). You could save as much as 87% on your CompuServe bill. You also get free access to 120 basic services, such as news, weather and sport

If you aren't already on-line turn to the back page, immediately, to order a back issue of AA105. This is the essential guide to getting your CPC in touch with the whole wired world.

CompuServe = 0800 289378 (voice mail), or www.compuserve.com (web page), or e-mail networkinfo@cis.compuserve.com.

#### **Get hammered**

As my granny used to say to me, you can never have too many PD libraries. Were she not 80, she'd jump for joy to hear that a new Liverpool-based library, namely Hammer PD has opened its letter box to the public.

The library also deals in Spectrum software, so owners of That Other Amstrad Machine can buy software.

## The scene of the prime...

...and up-to-date CPC contacts is now on your Covertape. Please help keep it current and informative by sending us changes and/or details for inclusion to Amscene Directory, Amstrad Action, 30 Monmouth Street, Bath, Avon BA1 2BW or e-mail them to us, putting 'Amscene Directory' in the subject line, to aa@futurenet.co.uk.

For a catalogue send £1 plus a tape to Hammer PD mentioning that you own an Amstrad (so that the catalogue is in the correct format). Hammer PD, 43 Gwydir Street, Toxteth, Liverpool L8 3TJ.

#### Tres Bon-zo

CPC veterans will remember the series of powerful Bonzo backup utilities produced by Nemesis in the eighties, which saved the lives of discowning tape users everywhere. There was also a monthly Bonzo newsletter and now Bonzo's Scrapyard is returning to your mats, on an 'occasional' basis, under the editorship of one Dave Caleno.

For a copy, send them an A4 SAE plus an extra first class stamp.

Bonzo's Scrapyard, 29 Chapter Road,
Strood, Rochester, Kent ME2 3PX

© 01634 724262 (8.30pm – 10.30pm).

Leon Brown, 'one of the owners' of Hammer PD, sent us this poster. If the project 'hits home' why not support it? See 'Get hammered'.

this issue of Amstrad
Action bear in mind that it's a
magazine of over ten years
standing. The writers on board
have been with the machine from
the start and a lot of you, the AA
readers, are veterans, too.
When a computer like the CPC

Be a

supporter

When a computer like the CPC reaches this point in its life, the commercial market doesn't really want to know. We've seen the gap in the market left by the big companies as they pull out, and we've reached the era of the smaller, independent software house, run by CPC fans.

What's our point? Well, the software you see advertised in the magazine is undoubtedly of a higher quality - the games are written by programmers who spent years learning to push the machine to the limits, and the serious software is written by people who know where the CPC's strengths lie, and, how to tackle the problems of lack of speed and power. Similarly, the fanzine editors and PD librarians know the machine and its supporters so well that they can ensure the highest quality of content for their libraries and fanzines.

Not everyone has to be that supportive of the machine, though. Someone has to be a customer and buy the software the dedicated programmers produce. If you don't, the people still out there will give up as well.

So, as you thumb through this month's AA, think about buying some of the great things reviewed within it – and be one of the people who supports the CPC, not one of those who asks where all the support has gone.

The AA team

Simon Forrester picks the letters and holds the authors up to ridicule. To retaliate or suffer the same fate write to Reaction, Amstrad Action, 30 Monmouth Street, Bath, Avon BA1 2BW or e-mail us at aa@futurenet.co.uk.

#### PD warrior

I've come to the conclusion that you're making quite a mistake regarding PD software - you've always bottled PD up in a certain section of the magazine. I guess this was all very well in 1990 when you had no shortage of commercial software, but it seems foolish now considering how often decent full-price software (games especially) are released.

You have always almost attacked PD with the usual 'if it's cheap, it's crap' psychology by always reviewing PD in a small section of the magazine rather than as commercial software that happens to be free. As well as labelling PD software, before it is even seen as not as good as commercial, this also discourages people from entering their program into the public domain as they know nobody will hear of them and if they do, they won't think of the programmer as being any good.

You also seem to hand over PD reviews to somebody else as if they aren't good enough for the full-time AA staff who review full-price software. Is that what you think or do you prefer people to think you think that?

Perhaps the reason you treat PD the way you do is because you never actually see any, just leaving it for a freelancer to go through like it's not worth bothering about. Okay, there is rubbish roaming around PD libraries too, but, please don't try to tell me that all full-price games are brilliant, because they're not. All I am asking for is equal treatment for software that the programmers have generously not put a price tag on.

Thanks for the great mag otherwise. Malcolm Dowse, Dublin

Yep - that's about the shape of it.

Seriously though, Malcolm, I think you've got us wrong. The reason full-priced software gets more space than PD software is because it costs more if you were paying £10 for something, you'd want to read a far more in-depth review than if you were getting something for free. If you buy rubbish PD you've wasted £1, not £10.

The fact that we hand it over to a freelancer doesn't mean we can't be bothered to look at it, just that we prefer to have a PD expert reviewing it. We do the same with Techy forum, Cheat mode, and most other sections of the mag because we feel the Amstrad Action specialist freelancers are the best people for the job.

Full-price games aren't always better – PD software makes a massive contribution to the CPC's software base, more so than the majority of commercial software nowadays. We wouldn't want to give AA over to PD reviews, though, as we feel there's a lot more to cover in these pages as well.

#### Orthodox geeks

My name is John and my pseudo is JFMC. I'm a member of the Greek demo group Chaos.

long time ago, and it didn't affect the users, the scene, or this magazine. We'll include Australia in our roundup (see 'Orthodox geeks') if anyone wants to get in touch, and you'll find out just how much is still going on in your country.

#### **Get connected**

Following the advice in your recent comms feature. I went out and bought a modem and RS232 interface second-hand.

I've spent a long time on bulletin boards and the Net, but can't access the Futurenet World Wide Web pages to read all about Amstrad Action. Why isn't there an AA bulletin board for people with modems to ring? Lee Archer, Bristol

Good question - why haven't we got an AA bulletin board? That all depends how many people have modems, doesn't it? If you'd like to use an AA BBS, write in and let us know - if we get enough requests, we'll look into it.

1 I have the superb driving game Continental Circus, but have encountered one small problem. No matter how many times I reach Japan, I can't seem to complete it. Can you help me by giving me a keypress cheat for it? 2 Whatever happened to the Fantasy World Dizzy solution?

3 Both the Amstrad Action covertapes 47 and 49 were not a little disappointing. Thanks for Titus the Fox, though!

4 Please can you put Purple Saturn Day on the covertage? I'd ask for Bloodwych but I understand you're having trouble getting it.

Keep up the good work - AA is great. Roger Gomes, London.

2 From what I remember, we took one look at the first set of Dizzy solutions, realised that they were deathly dull for all but the most ardent Dizzy fan, and

> decided not to run the next one. I hate Dizzv. anyway. 3 We always try to get the best games on the tapes, but they're never to absolutely everyone's liking. If you've got any suggestions, let us know and we'll see

what we can do. 4 Purple Saturn Day is, unfortunately, disc-only, making it fairly impractical for use on the covertage. As for Bloodwych, the search continues. It's a great game, and if we can get it for a tape we will.

Dizzy - not everyone is a fan.

#### Amstrad do. They stopped supporting the CPC a If it's worth saying...

t's worth saying well. (I don't think we'll be done for abuse of copyright on that one...) All in all, we've had a good round of letters this month, so if you have any comments, queries, gripes or announcements, this is your page and your tunity to voice them.

IMAGEPRINT Amscene directory

Richard Fairhurst takes a trip into American history with this month's covertage but still finds time to smarten up his image.

Avoid drafts, use Imageprint to improve the quality of your print-outs.

#### ImaaePrint Robot PD

and load any program.

If you have a 9-pin dot-matrix printer, you know how shoddy the output can sometimes be. Draft quality is fine for listings but little else. And near-letter quality... well, although you might use it for a letter to Great Aunt Agatha, it's not the best way of convincing your bank manager that you really could do with an 8000 loan, especially if your printer's an Amstrad DMP model.

Enter ImagePrint. By intercepting all the nformation sent to the printer and replacing it with its own, custom-designed font (by Geoff Short), it makes your printed output presentable, for once. The standard Epson codes for bold,

italics, and underlining are understood, as re those for pica, elite, and proportional spacing (although, as usual, bear in mind that your word processor's justification facility won't co-operate with proportional spacing). If you're bored with the standard font, ImagePrint even

has a utility to design your own. Note that each character needs to be defined twice - once for the normal font, and once in italics.

Once ImagePrint has loaded, type IIP.ON to enable it, and IIP.OFF to return to normal printing. It's compatible with all word processors (such as Protext) which use the CPC's standard print routine.

tape, your name and address, a description of the problem and what CPC you use.

BA1 2BW or e-mail us at aa@futurenet.co.uk putting 'covertape' in the subject line.

In AA66, we awarded North and South Mastergame status, with a rating of 91%. AA reader Nicholas Campbell of Newtonards, Northern Ireland, says it's his favourite game...

It's 1861 in America (they always were a bit behind the times) and the right-on Abraham Lincoln has decreed the abolition of slavery. The folks in the Deep South (home to double-chocolate Mississippi Mud Pie, Dallas and R.E.M.) aren't too chuffed and have formed the Confederacy. Needless to say, Lincoln's men don't really want to see half of the States break away..

Thus was born the American Civil War.

Once you've chosen your game controls, the options screen appear. You can then click (move the pointer and press Fire!) on:

- the characters to select the difficulty level,
- the flag behind them to select which side you want to play and also on;
- the three small pictures at the top to turn

COVERTAPE

North and South - the options screen. Get your new identity here. And have a yankee doodle of a day.

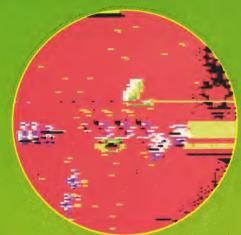

'disasters' (Indians, storm clouds, and European reinforcements) on or off.

If you don't want to play the arcade sequences, click on the small pictures below them. Finally, click on 'Go' to start the game proper.

To move your armies from state to state, simply click on their current location, followed by the one you wish to move them to. Moving them on to another of your armies merges them into one, more powerful force, while moving them on to your opponent's armies causes a battle. (Use the key you've defined for 'select' to switch between infantry, cavalry and cannons.)

Should you require more troops you need five bags of gold. Get these by possessing two towns, and a railroad link between them. You can conquer towns from the enemy in an arcade sequence, where your objective is to reach the flag at the far end of the fort before your time runs out.

Finally, if you have conquered South Carolina and the appropriate option is switched on, your army occasionally receives a ship of European reinforcements, which can't be bad.

Exchanging 'Civilities' in North and South, which we awarded Mastergame status.

Keith Woods was shattered playing Crack-It but recovered to write a round-up of the CPC PD magazine, Rundschlag.

CRACKED IN S

fair bit of luck to crack the code. The inclusion of different skill levels, which would allow you to set the number of chances you get, would have made this rather average clone a much

Rebound is a two-player game of what appears to be some form of futuristic bowls. It's not quite as your Grandpa might play it, but it's about as exciting.

No, I tell a lie, it's worse. At least in real bowls you get a ruddy great field to hurl your projectiles down, to try and get them as close as possible to a very small white ball. In this version, you have the far less considerable length of the CPC screen to play with and stopping anywhere short of the run-off area scores you points.

worse, you aim by stopping your slow-

Crack-It: you are allowed five attempts and no passes. This just makes the thing too easy. Even moving ball as it moves from left to right at the bottom of the screen. The greatest fun in bowls is the sadistic pleasure gained in knocking your

opponent's carefully placed ball into oblivion.

and this game Annihilation is no exception.

a sideways scrolling shoot-'em-up. You have to fend off countless waves of alien invaders that appear from the left of the screen with the aid of just one.

creatures, your action also saves yourself in the shorter term. It's vital that you pick up the fuel and energy that the aliens drop when shot if you're going

Annihilation is really nothing amazing, but it is both colourful and fast enough to make sure you are kept well occupied on a dull and dreary day.

> me happy by proving again the great gaming truism - that simple, unadulterated gameplay is far more important than any

#### 4 Asteroids

Asteroids is another simple PD version of the classic game of the same name from vestervear.

already know (is there really anyone left who doesn't?), in Asteroids you control a spacecraft plonked in the middle of the screen with only rocks for company. Unfortunately the rocks don't

screen trying to ram you out of existence. Your only option is to blast them to smithereens before they succeed in doing just that.

#### 1 Crack-It

Crack-It is basically a clone of the old game Mastermind, that is, the one without the funny Icelandic bloke questioning train spotters. Instead, the computer chooses, in order, six coloured spheres from a choice of 12 and you have to guess what colours have been put where.

Beat Crack-it: win a 'Magnus' of champers.

After each guess, the computer tells you which spheres you got completely right, which you chose correctly but put in the wrong place and which aren't included. The aim is to guess the place and colour of all six spheres in just five attempts. Unfortunately, a mere five attempts makes this version of Mastermind just a little too difficult for my

liking. As well as

applying logic,

vou need a

Imagine a game in which you never miss - that's Rebound. The winner of the game is nearly always the player that goes second, as his or her last ball is always the one which is left, because all the game consists of is taking turns to knock each other's balls off the screen.

Rebound: if you play second, you come in first.

And you don't even get to wear one of those kinky little. white hats...

each other you know the result's going to be good.

This Monitor has been written by Antoine Pitrou,

**By Antoine Pitrou** 

as he says himself:

enough you'll remember that a long time hence Amstrad Action gave SuperMonitor a whopping 90% rating, which leaves little room for improvement.

Has Antoine managed it?

Yes! And no! A few features have been added to Turbo SuperMonitor, but at a price. Probably the most interesting and useful aspect is that Turbo SuperMonitor itself is stored in part of the

video RAM. This means that ordinary RAM space is left totally free, which is a boon if you're disassembling a really long file.

The downside of this, of course, is that you're left with a postage stamp display, which is just a little annoying when you've got large volumes of information to display. Granted, TSM's scrolling routines are fast, but I can't get used to peering a postage stamp.

The rest of Turbo SuperMonitor moves at a decent speed as well - it's clearly very well programmed. However, apart from a few cosmetic changes, it shows little improvement on Crown's effort.

One thing that may be useful, however, is that unlike SuperMonitor it contains full English

instructions, and even the odd help message.

Turbo SuperMonitor may contain a few improvements, but it makes too big a compromise to make you want to change from using SuperMonitor.

It would still be well worth having, however, for those odd occasions when a program like this might make life just a little bit easier.

#### **Get in touch**

It's a long time since we've said this, so it's high time we repeated it again... If you've written any PD programs you'd like reviewed, if you've set up a PD library you think could do with a mention, or if you have any comments or queries to make about PD, then write in. Mark your envelopes 'Public image', Amstrad Action, 30 Monmouth Street, Bath, Avon BA1 2BW or e-mail us at aa@futurenet.co.uk putting 'Public image' in the subject line.

#### Next month:

Pop quiz time. Next month's PD column will be slightly different (though still covering the essential selection of the best PD software the planet has to offer), because:

- it'll be hosted from Uranus.
- we'll be sending a particularly good-looking female or rather handsome male (depending on your stated preference) to whisper the ratings into your ear.
- Simon Forrester will be writing it. Employees of Future Publishing, authors of

PD software and Simon Forrester are not eligible to enter. Simon's decision is final.

#### Rundschlag

MEGABLASTERS

Rundschlag:

1120

Rundschlag, described as "An International Magazine supporting the CPC PD" is a long running German magazine, and issue 16 recently arrived for review in the AA office...

Rundschlag is a magazine that has been doing Trojan work to support the CPC for many years.

In fact, in many ways Rundschlag is much more than just a magazine. It's more like the newsletter of an association of ardent CPC enthusiasts, because, although it lacks a formal club structure, all the readers are encouraged to help out with every aspect of the magazine's production. Indeed, without the support of the readers, the magazine could not exist. In this respect, it is similar to the excellent WACCI in Britain.

You could be forgiven for thinking that in these, perhaps slightly leaner, times for the CPC, the quality of magazines like Rundschlag would founder. In fact, anyone who remembers the rather haphazardly produced

Rundschlag of a number of years ago is surely shuddering at the thought of what it must look like today. The pleasantly surprising truth, however, is that, rather than declining, the production quality of Rundschlag has improved dramatically.

Turbo SuperMonitor: new things at a price.

While the commercial world may have almost completely abandoned the CPC, ordinary users have responded by rallying around Rundschlag to put it among the best designed, printed and bound amateur CPC magazines. In the meantime, however, the quality of the content has remained steady.

Given its underground roots Rundschlag was always very much a PD magazine and, now that there are so few commercial releases, it is almost entirely so. As well as covering all the latest PD releases Rundschlag offers:

50 pages of technical articles (by the best PD programmers);

letters:

now in English. • hardware projects; help pages and also;

 coverage of the computer world in general (in recognition of the fact that many CPC owners have more than one type of computer).

The biggest problem with Rundschlag is the same one that has bedevilled it since its inception the lack of support from English-speaking countries, especially the largest, Britain. Rundschlag has sought to be a pan-European magazine, yet has always had trouble getting enough English articles and as most of it was in German no-one in Britain wanted to buy the magazine,

To overcome this Rundschlag has been translating most of its articles into English. In issue 16 it claims to have translated 90% of all articles, although some of these translations are summaries so the English content is still small. It's a big improvement, however.

The most exciting thing about the new Rundschlag is its imaginative coverdisc scheme when you subscribe you get a coverdisc full of the latest PD. You are trusted to send back the disc when you've finished it - with any new PD you may have on it. This is not only a great service, it also helps the spread of PD software throughout Europe.

Rundschlag is one of the best things the CPC has got going for it in Europe at the moment. Each issue is brimming over with very useful information on everything from turning a GX4000 and an old CPC into a fully functioning Plus, to pages of games cheats. It's just a shame that it's something that British CPC users continue to miss out on, as their contribution would be greatly appreciated.

#### CLASSIFIEDS

Simon Forrester raids Phil-the-ex-para-turned-postie's bag to sort out more tips for the games you love to play.

#### **Chuckie Egg**

a truly classic game, and we're going to give it yet more coverage this month with a cheat for infinite lives that's been around since the dawn of time (well. the hatching of Chuckie Egg, anyway). Strangely enough, real chuckie egg is foul, unpalatable muck.

20.LOAD."chuckie.bin".&8000 30 · POKE · &867B,0 40 · CALL · &9A97

Ah - that feels so much better.

#### Lemminas

Since the classic Psygnosis puzzler first appeared on the CPC. AA has been flooded with requests for help, Indeed, AA pulled it apart in October 1992. From the amount of letters we get about the game, it doesn't look as if anyone has the original, so...

- To sort out a bug with the disc version of the game use a Multiface to poke &98C8 with &3C. If you do this the game can cope with level codes.
- Holding down the keys SHIFT, Z, E and X on the screen that displays the current level moves you on to the next one. Don't go past level 60 though, as all kinds of horrible things happen
- It's possible to turn blockers back to walkers if you get a lemming to dig under the ground he's standing on. This helps if you don't want to have to blow the sweeties up at the end of each level, reducing the amount you save.
- If you run out of blockers, dig a pit to trap the lemmings in. Build ramps to get them out of it.

#### Pokerama!

Over the past two months. Lee Rouane has taken you through every step of finding you own cheats for the games you like to play. Of course, you need a Multiface, but if you've been following his (excellent) advice, you should have a whole stack of your own, origin Multiface codes by now.

What to do? Send them in to Cheat mode, Amstrad Action, 30 Monmouth Street, Bath, Avon BA1 2BW or e-mail them to aa@futurenet.co.uk putting 'Cheat mode' in the

Can you hack it?
Look out for the second part of Lee Rouane's
guide to hacking next month. Well, everyone is entitled to a holiday...

 Lemmings can't fall too far. If you are building ramps, build another one parallel to the first, so that if any of the furry fiends overtakes the ramp-builder. it drops on to the ramp below and walks back to safety. Achieve this by building your first ramp at the edge of a platform and the second a little way in.

Thanks to Jamie Turpin, Gordon Masson and Mike Wong for that lot.

Ever since Dave Golder and I put it on the covertage, we've had requests for help with Alternative's platform adventure. This can be a problem for him, as Dave now works for a different magazine altogether, (the soon-to-be-launched science fiction title). SFX, so we'll make his life. enjoyable again by printing a complete solution.

- 1 Go left and pick up the power card.
- 2 Head back to the right, pick up the wire-cutters and climb the tree close by.
- 3 At the top of the tree, use both the objects.
- 4 Go to the left (along the top) and get the rope from the room.
- 5 Go back down the tree and use the rope to make a bridge across the uniumnable gan
- 6 Go over the bridge, and take the old clothes you find there. 7 Continue to the left and make a scarecrow in the
- field 8 Carry on to get the chocolate seeds (chocolate

- 13 Go left and build another bridge with the tree. 14 Cross the bridge and get the oil, the key and the explosives.
- 15 Go to the far left and use the oil and key on the
- 16 Go down into the mine and use the explosives on the wall.
- 17 Leave the mine, go back to the right and get the
- 18 Head back to the left to get the torch, and go back to the mine.
- 19 Go through the mine using the torch, and get the
- 20 Leave the mine, go to the left and find the broken ring. You can now use that same jewel to

000E

repair this ring. 21 Go left, return to the tree and give the ring to

22 Go to the right and get the empty glass. 23 Go back down the tree,

head to the right, fill the glass at the well then go to the right and get the record.

24 Go left, head back to the tree, then give the glass of water and the record to mum. 25 Go down the tree, then left, in search of the

matches and banger. 26 Light the banger.

27 Go to the right and get the coin.

28 Go to the ice cream van and buy an ice cream.

29 Go left with the ice cream and lit banger, then pick up the flower seeds.

30 Back at the tree, you can give the ice cream to mum. 31 To the right of the base of the tree you find a

flower pot. 32 Go to the left and get the bug spray, then

continue to the field 33 Use the flower seeds, flower pot and bug spray to grow a rose.

34 Go back to mum and give her the rose.

#### **Wild West Seymour**

As if this game wasn't already stupidly overeasy, here are some handy level codes to keep the genie off your back...

#### **Bubble Bobble**

Anyone who hasn't survived to see the final levels (over 79) on the classic Firebird bubble-'em-up might be grateful for the password you need to load the thing. Be careful when you type it in, though...

#### Cecco games

One way to get a few advantages in those tricky Cecco classics is to redefine your keys at the start: Exolon - Z. O. R. B and A Cybernoid – Y, X, E and S

Cybernoid 2 – O, R, G and Y

Stormlord – This one is easy and plainly visible to anyone who goes through memory searching for text with a Multiface (you do. don't you?).

On the title screen, type BRINGONTHEGIRLS quickly and without spaces, and the number 12 should appear in the top right corner of the screen. Pressing a number from 1 to 4 now takes you to that level with infinite lives.

# Regi

As busy as a market in downtown Cairo on market day, this is the market place to be seen in. Market my words...

#### PEN PALS

Pen pal wanted by lady with an Amstrad 464 with no add-ons. Getting to grips with BASIC but would like to earn more than AA teaches. Nora Lees, 285 Franklin Road, Cotteridge, Birmingham B30 1NH.

June 1995 AMSTRAD ACTION

# Basisally

Simon Forrester needlessly overcomplicates your life, showing you how to manipulate relocatable machine code routines easily from BASIC and then pauses to wonder why nobody's cheering.

It's the same old story – there's so much you can add to BASIC with just a little bit of machine code, but writing the stuff is just way too much hassle. This is, after all, a BASIC tutorial, and you don't want to get swamped with overly complicated stuff, such as creating new commands.

So, if I were to tell you that there's an easy way to manipulate, manage, automatically relocate and run machine code routines, a way which is already hidden in the depths of Locomotive, you'd probably want to know more. Bear in mind, by the way, that you're not going to need an indepth knowledge of machine code to use this system.

Let's start at the beginning...

#### Variables

You're familiar with variables – the letters to which you assign values:

10 FOR a=1 TO 10 20 PRINT a 30 NEXT a

In this situation, the variable a is given a value by the FOR/NEXT commands, which is printed by the PRINT command. This is how variables are used to store numbers. You don't have to stop at that, though...

10 a\$=|Blimey!| 20 PRINT a\$

This time, a variable has been used to store a string. You can tell it's a string by the '\$' symbol that follows the variable name. What you're really interested in is exactly how this is stored in memory.

#### On location

If you were to look at the area of memory in which this string was stored, you'd see the first location containing a 'B', the next containing an 'I', the third with an 'i', and so on. They don't actually contain these characters, though – the location contains the number from 0 to 255 that the CPC uses as an ASCII code for that character (B is 66, for example). Similarly, if you look at a machine code program in memory, each location contains a number from 0 to 255, these numbers this time building up the machine code program.

'Wouldn't it be great if the letters that built up the word 'blimey' meant something in machine code

when converted to ASCII characters?'
You're catching on quickly...

#### As an example...

Type in and run the following program, without worrying that it doesn't do anything notable, but without resetting your machine afterwards:

10·rots=||
20·READ·byt\$
30·IF·byt\$=|\*\*|THEN·END
40·byt=VAL(\_&|+byt\$)
50·rot\$=rot\$+CHR\$(byt)
60·GOTO·20
70·DATA·3e,07,cd,5a,bb,c9,\*\*

Don't worry too much about how the program works, suffice it to say it takes the hexadecimal numbers stored in line 70 and fills **@rot\$** with the letters they correspond to on the ASCII table. If you like, you could try:

#### PRINT · rot\$

This gives you an ASCII representation of the set of numbers, and proves the program worked. If all went well, you should hear a beep, as the second character is 07, which translates to a beep when printed, displaying nothing on screen. The reason the 07 code is in there is because this is one of those stupid, annoying machine code programs that just beeps, so you can check that it works.

#### Tracking it down

All you really need now is to find out where in memory @rot\$ is stored. Locomotive BASIC has a provision for such a time:

#### PRINT · @rot\$

Note the @ symbol before the variable's name. This is an automatic numerical variable that hovers somewhere between 0 and 65535. If you end up with a minus figure, don't worry, that's just the way BASIC prefers to think of the number it's dealing with. You can now call the routine, though:

#### CALL · @rot\$

With a bit of luck, you should hear a beep (check the volume on your machine if you can't hear it). This means not only that the system works, but that you've learned all you need to.

#### Loose ends

You've done it! rot\$ contains a machine code routine, and you have found a way to run that same routine. You can use the program to create any routine by changing the figures in the DATA statement on line 70, and store the variables using the OPENOUT command (and friends) that

Angela Cook and Rob Buckley explained so ably in AA115. (If you missed it turn to the back cover to see how to order a back issue.)

#### What about 464s?

If you are a 464 owner and you get tired of the beep, you could try the following numbers to get your own COPYCHR\$ routine. This allows them to read characters from the screen (a feature lacking on the 464). The numbers are:

cd,60,bb,32,80,be,\*\*

To use it, move the text cursor onto the square you want to check, CALL the routine, and PEEK the value from &be80. If you wanted to read the screen position 1,2, for example, and put the value in a variable called c, you would use the following commands:

LOCATE·1,2 CALL·@rot\$ c=PEEK(&be80)

#### **Looking** ahead

Keep watching this column, we'll print more of these little sets of numbers whenever we can fit them in, to give BASIC just that little bit more power. But until then...

#### **Check** it

Check the program is correct using TypeChecker – see page 16.

#### NEXT MONTH:

Create animations and colourful displays with palette switching with that writer of many colours and many guises Simon Forrester.

a rare art of the form of the council of the counci

'Publish and be damned', they say. Don't burn your fingers by forking out for the wrong package – use the AA guide to desktop publishing. Richard Fairhurst plays Beelzebub.

t's thanks to desktop publishing that this page of AA looks the way it does. Buried deep on the hard disc of a Macintosh in the AA offices is a file which, when loaded, looks the same as the one you have in your hands now: in colour, with screenshots and everything. The Art Editor creates an outline page with QuarkXPress, flows text on to it, adds some graphics, and juggles the whole thing around to produce a clear, readable layout...

Surprisingly, for a technique that can produce such high quality results, desktop publishing has only been around for the past decade. Since 1984, in fact. The year when both the Apple Macintosh and our very own CPC were launched. Despite the huge

difference in price (£3000 versus £300), the technical capabilities of the 128K Mac of 1984 weren't that different to a CPC 464 – a faster processor and a bit more memory were about the size of it. The Mac's real innovation was its graphical user interface, and this is where DTP sprang from. Although books were increasingly being produced with computers, magazine and newspaper work only became realistically possible with a computer which treated text as a graphical object, to be styled in any font or size you liked.

hant bank faced collaps

Surprisingly, for a technique that can produce such high quality results, desktop publishing has only been around for the past decade

Although the gap between the CPC and the Mac has widened over the last decade, a disc-based,

AicroDesign: excellent graphics features, orilliant print-outs, clean user interface.

128K CPC is still capable of producing decent pages for a fanzine, notice or poster. Most of the fanzines reviewed in 'Further Reading' – WACCI, Artificial Intelligence, CPC User – are produced using the machine they write about and one of the many DTP options available for the CPC.

There are four main packages. All are highly accomplished programs:

- MicroDesign Plus (CampurSoft),
- Stop Press (AMS),
- Page Publisher (SD Microsystems), and
- PowerPage 128 (Robot PD), which, er, I wrote. I've ranked them in four key categories, but bear in mind that a third or even fourth place ranking is no insult when dealing with programs of this calibre.

#### Graphics

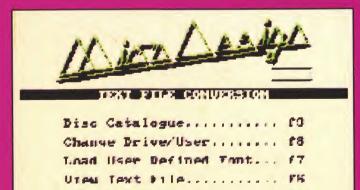

All four packages provide the basic graphics functions you'd expect. You can:

- draw lines, rectangles and circles;
- fill shapes with a user-definable pattern;
- copy an area of the page to a new location, and;
- undo your last action if you messed up.So, no great surprises here.

Stop Press wins on a simple numerical basis. It's packed with features, such as enlarging, reducing, reflecting, rotating and scrolling areas (although question why you should want to 'scroll' an area of the page, rather than moving it somewhere else).

Switching between operations, though, can be cumbersome. While to draw a line, you select the 'paint-pot' icon, followed by the 'shapes' menu, and the 'line' option. If you're especially unlucky, the program forgets how to draw lines, and you have to load in some code from the program disc first.

Although *MicroDesign* is missing some of the more esoteric features of *Stop Press* it wins points for sensible program design. For example, all the graphics options are grouped together in one section, where they can be accessed by a single keypress. Added to the unique icon system, which stores a set of small pictures in memory ready to be

MicroDesign Plus: some of this program's functions are hold in a separate enhancer program.

Convert fext bile ..... F5

Options Menu...... f4

MicroDesign Plus: use this program's icon feature to place silly pictures throughout your documents.

placed anywhere on the page, this gives MicroDesign the edge in graphics capabilities. It loses marks, though, for the enlargement routine which is in a separately-loaded program (the MicroDesign Plus enhancement program).

Stop Press wins on a simple numerical basis. It's packed with features such as enlarging, reducing, reflecting, rotating and scrolling

Page Publisher, too, provides the useful features of Stop Press as well as a clever user-definable pen shape feature, however, there is one vital omission a zoom or magnify mode. An omission which makes fine detail work almost impossible. Another downer is the lack of visual prompting when drawing a shape. And although 'rubber-banding' is available as an option (it's standard on the other programs), it's very slow and makes the program almost unusable.

#### **Graphics ranking**

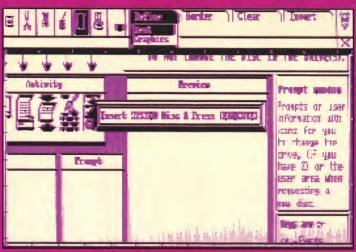

- 1 MicroDesign Plus
- 2 Stop Press
- 3 Page Publisher
- 4 PowerPage 128

PowerPage 128 does provide a zoom mode, but its graphics facilities are sparse compared to the other three. There is no rotation routine (although you can reflect shapes), no enlargement or reduction, no freehand option and there are no pen shapes.

Operation of PowerPage 128 though, is quick and easy - drawing a line is simply a matter of pressing COPY, moving the cursor to the end point of the line, and hitting COPY again.

If it really were the case that 'the medium is the message', MicroDesign's graphics power would make it a Hermes among DTP packages. However, the winner in the graphics section includes just one text option, 'Write', which lets you write in either the standard Amstrad font or a reduced version, single or double width. There is no word-wrap, no justification, nothing. The only consolation is that you can use the icon system to produce headlines and a number of excellent fonts are supplied.

For columns of text, you have to load the

Stop Press: you'll be looking at this 'Insert disc' prompt rather a lot when you use this program

enhancer program which takes a plain text file and creates a clip art file containing this text in the font of your choice, ready to load into MicroDesign. However, this method still won't format your text that's up to your word processor - and so you lose features such as wrapping text around pictures, micro-justification, proportional text, and so on.

Stop Press and Page Publisher have similar (good) text capabilities. You can type text directly on to the page or import it from a disc file. You can set columns anywhere on the page, and micro-justified. proportional text is no problem in any size. Both programs allow you to load three 16-by-16 fonts at once (Stop Press, allows you to load the standard Amstrad font, as well), and edit them any way you like. Stop Press has another advantage, too - the excellent autoflow option, which automatically lays text out around any pictures on the page. This is ideal for embedding clip art between columns, say.

PowerPage 128 makes up for its poor showing in the graphics department with a very respectable micro-justified, proportional text (in either an 8-by-8 font or a 16-by-16 headline font), and you can enlarge and edit the fonts easily. That nice autoflow

#### Text ranking

- 1 PowerPage 128 2 Stop Press.

- 4 MicroDesign Plus

Best, though, are the bold, italics and inderline options. in and out of, half-way through a paragraph. If you are importing a Protext document you can save these as control codes which PowerPage 128 automatically picks up. Although rather slow these are, however, the best text-handling facilities of the four.

#### **Printing**

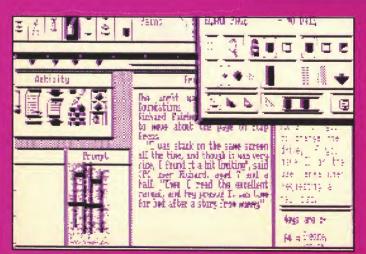

It really is a case of swings and

roundabouts for CampurSoft: MicroDesign's output is excellent, whether the page is printed as A4, A5 or even A6 (a quarter of the size of this page). There's also an option for a 'strip' format page which combines four of these files on one sheet of paper to create an incredibly high resolution page, with an output which is almost as good as that of a cheap laser printer. However, it's nigh on impossible to create anything more complicated than a poster in this format, as each page needs to be split over four horizontal files. A column-based fanzine layout, for example, is a definite no-no.

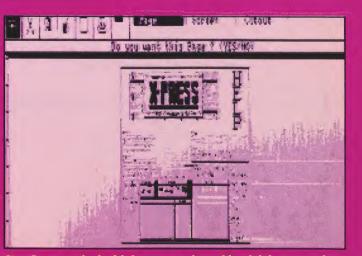

MicroDesign has a 'strip' format page which creates an incredibly high resolution page with an output almost as good as that of a cheap laser

There's more... You can select normal or 'single-pin' printing (highly impressive, but a sure-fire way of wearing out your printer), and light or dark input. Page Publisher and Stop Press can't top this, but both are capable of producing good quality A4 or A5 print-outs in draft or high quality.

Unlike the other three, PowerPage 128 is designed around an A5 page size (as used by many

Stop Press: this CPC desktop publishing package provides every graphics option you could want

her: this is a good all-rounder of a desktop publishing program for both text and graphics.

fanzines) rather than A4. This means its A4 output is coarse and blotchy, although you can alter the 'print quality' option. A5 print-outs are more satisfactory than those produced by the other programs.

All of the four programs output to standard Epson-compatible 24-pin printers. The output is usually slightly elongated. Stardump is a utility which solves this problem for MicroDesign users.

using a DTP package, of course. There are a number of other CPC-based options available to would-be press barons. If you're producing a more staid publication, you might like to take the approach of the serious fanzine WACCI. Instead of using Stop Press, MicroDesign or the like, load up a word processor - Protext, for example - and produce columns of text. You can produce artwork and headings with Advanced Art Studio or GPaint, and assemble the whole lot onto a sheet of A4 with scissors and glue, ready for the photocopier. If this is your route, there are several programs to spruce up your WP output including ProPrint. Protype, Qualitas, and ImagePrint (on this month's covertape) which replaces your printer's standard typeface with a quality, user-definable offering. Although these are largely irrelevant if

There's also Sentinel Software's Pro-Ext which plugs on to Protext and allows you to incorporate large headlines and clip art into a standard Protext document, and as such is ideal for simple DTP. (And, yes, I wrote that one, too.)

MicroDesign features are held in the MicroDesign Plus enhancer, a separate program (though you can easily access it from the main code). As these are generally the lesser used features, plus the slightly feeble text-to-clip art conversion routine, you probably won't be too put out by this.

#### Page Publisher and PowerPage 128 hold all the program code in memory at one time, so you don't need to be flipping discs constantly

appear, which can become irritating when you know your way around the program – PowerPage and MicroDesign both bring up their option lists almost instantly, and boast more manageable cursor control. Page Publisher is most easily controlled with a joystick or mouse, and MicroDesign works happily with keyboard, joystick, or mouse. PowerPage users are limited to keyboard control, although this can make drawing operations, especially, faster when you get used to them.

Available keypresses are constantly displayed on the MicroDesign screen, which makes operation extremely easy - you very rarely need to refer to the (brief) manual. Page Publisher, too, is supplied with a short but complete reference.

Stop Press almost recovers some of its former glory here, with a superb manual, full of illustrations and tutorial walkthroughs. PowerPage 128 loses out by being an (almost) PD program. There are plenty

Alarst PDs presission expired for consectal or semi-connectial distribution

#### Keeping you paged - the top four DTP packages

Stop Press is a true veteran of the CPC (AA featured a review of

its original incarnation, Pagemaker, more than eight years ago).

Stop Press is packed with features, and does most of what you could expect a CPC DTP package to achieve. Both text handling and graphics facilities are very good indeed.

Despite all this, Stop Press's awkward way of working and frequent disc accesses are likely to drive you up the wall. However, if you can survive constantly swapping discs on a single-drive machine, and you have an AMX three-button mouse. Stop Press could be the package for you.

Why not try using a friend's copy for a week or two before handing over your dosh?

MD Plus features excellent graphics features, brilliant

print-outs, a clean and simple user interface...

MicroDesign has a lot going for it. If you're producing mainly graphically-based documents posters, for example, or headlines and illustrations for a fanzine where the body text is printed with a word processor - then MicroDesign is by far your best choice.

Fanzine editors have to pass up the chance of the lovely headline fonts supplied, but as it stands, the current version of MicroDesign really hasn't progressed far enough from its MODE 2 art/design roots to be a flexible choice for integrated text and graphics work.

Few fanzines would risk printing CPC-generated fonts without being proportionally spaced, at least.

space', giving a more

professional result.

## Page Publisher

comes out well, if not outstandingly, in each

category I tested it. However, fanzine editors, in particular, will miss the ability (present in the other three packages) to import the .CUT clip art format. Originally a creation of the Stop Press developers this is now the standard for CPC and PCW DTP programs. It limits you to SD's own two picture discs plus a decent selection provided on the B side of the program disc.

If you can live without that and the zoom and autoflow options of other packages, and if the laid back way the menus roll on to the screen doesn't offend, then Page Publisher is a good all-round choice if you don't want the fanzine-centred features of PowerPage or the all-out graphical approach of MicroDesign.

#### ATTIN THE Offer a user and a v new british dien life. has final

PowerPage 128 has been adopted by fanzine editors all over Britain as their program of choice, and it's not difficult to see why. The powerful text formatting options, with the quick keyboard-based operations that speed up page layout, are ideal for the purpose.

Its preference for A5 print-outs, although great for the fanzine editor, isn't so useful for notices and similar applications. A4 printouts are available, but they're a bit tatty. PowerPage 128 is noticeably lacking in the advanced graphics department, too, which might either cause you to run to an art package (such as the PD GPaint) or to MicroDesign Plus. At the low PD price, though, you're not going to lose out on much by trying it.

takes up less space on the page than the wider letter m inhabits. Amstrad Action is laid out in proportional text, usually displays nonproportional writing.

RUBBER-BANDING An easy way of positioning graphics on-screen, where the line or rectangle you are about to the cursor to set its destination point.

Simon Forrester trawls the clear blue ocean of fanzines and finds a silken pearl among the coarse nets. Perhaps, though, it's really just a matter of scale...

#### 8BIT

PRICE: £1.25 per copy or get ten issues for £10. AA readers can buy individual copies for £10 see 'What's happening', page 3. **EDITOR: Brian Watson** ADDRESS: Harrowden, 39 High Street, Sutton-in-the-Isle, Ely, Cambs CB6 2RA # 01353 777006

On its fifth bi-monthly issue, 8BIT has changed its name. Formally known as 8BIT Mart, the magazine dropped a word to signify the change in its stance. Brian Watson, the Cambridgeshire-based editor, says he is "primarily concerned with

ideas and information for users of 8bit computers". To this end, issue 5 is tying up the loose ends, so to speak.

#### What you get

You a lot for your £1. The 16-page magazine comes with two extra supplements, each consisting of four A4 sides. These work well, as the first is dedicated to readers' small ads and the second is a more relaxed, 'comic' supplement which contains more personal news, as well as supplier contact lists and helpful quotes that I can rip off, for example:

"The fear of danger is 10,000 times more frightening than danger itself". This is a quote from Robinson Crusoe by Daniel Defoe. Lower your daily fear quotient by regularly backing up your work.'

I get the feeling that this is from someone who's used to computers. Ouotes aside, 8BIT is a great fanzine: it covers topics from C64 loading problems to CPC Protext tips in a friendly, cheerful-yet-competent, style.

There are probably three people somewhere in Warwick who don't like the idea of reading about different machines, but 8BIT's editor is clearly a man with a devoted passion for the CPC, PCW, Spectrum and C64, and this clearly shows through in his work.

#### In the style of...

The secret to 8BIT is the writing team, in that they don't really seem to have one - you get the feeling that the writer has abandoned writing in favour of popping round for a chat. Information and ideas are woven through happy tales of 8-bit exploits, while Tom Dean happily talks about the contents of his discmag, Impact. The combination of snippets and longer pieces works well, making for an comfortable and entertaining read.

The other benefit of the mag is its disproportionately high number of adverts. When Brian implements the new policy of fewer ads the abundance of information that adverts create will be missed. I have little doubt in Brian Watson's ability to more than make up for the adverts, but they do provide a useful service of their own, taking the

ISSUE 5

April/May 1995

Harrowden, 39 High Street, Sutton-in-the-Isle, ELY, Cambs. CB6 2RA Tel: 01353 777006 Editor: Brian Watson

EDITOR'S COLUMN - ISSUE 8

Never one to stand still, 8BIT MART is now 8BIT. This reflects the fact that although advertisements are still very much part of the whole. It is now primarily concerned with ideas and information for users of 8-bit

To that end, this issue is by way of being a round-up of unfinished business. So, if I've omitted anything sent in recently, I'm sorry but will try to get it in next time.

Among items 'in the pipe' for the future 1 have a long piece on desktop publishing using an 8-bit computer and the optional extras to get the results you want onto the page and then into your prospective readers' hands. Instead of simply concentrating on

Instead of simply concentrating on a single computer or program as other magazines have done. I have recruited a professional design consultant with years of experience in advertising and the news media. He has gone back to first principles of presentation and set out the fundamentals for 8BIT readers, including cost implications of the options at different stages.

He said he found it a challenging exercise to work within a smaller range of options than he is accustomed to, and during the couple of days we spent on the project, he said that all the 'rules/guidelines' of good design practice could be fully implemented on a poster, magazine, or other sort of publication produced using an 8-bit computer as the heart of the process.

Have we got a scoop? We have got a scoop. See page 12 for the big news. Sorry it did not make the front page, as such landmark stories should, but most of the layout work was done and I didn't want to delay the news by redesigning the whole thing.

#### CONTING SCOR TO THESE PAGES

I would like to do a comprehensive feature on printed (rather than tape or disc) fanzines on 8-bit computers, but I need your help.

If you publish an 8-bit magazine ase send me a recent copy so that I canat send me a recent copy so that I can tell the world what you are doing. Ideally, a letter with the frequency of publication and subscription rates would be appreciated as well.

If you subscribe to one of more of see small-press publications I'd these small-press publications I'd like to borrow a recent issue to see what I, and others, are missing. I will return such copies promptly. Please don't leave it to someone else.

The only magazines I already have to hand iso don't need more of) are CRR\$(7), Cornwall PCW Club Newsletter, CPC User, The Disc Drive, Sixty-Four, and WACCI. Whether club publications or 'open subscription', I'd like to cover both. There is no comparison or 'udgement element in this; I just want to get the information on what's out there to a wider audience. Thanks to all those who helped. See you in June.

8BIT, as it stands, it's a good read. More please.

#### FANZINES

pressure off the editorial to keep up with what absolutely everybody is doing.

#### Appearances can be...

The only real criticism that can be levelled at 8BIT is its appearance, but to be honest that's not really an issue - the lack of PowerPage masterpieces doesn't detract from the text.

Personally, I hope 8BIT doesn't change its style too much - to move away from the atmosphere and feel of the latest issue would be a shame. As you read this, the improved issue should be hot-footing its way to the AA office, and you can be sure of an update next month. In the meantime, I recommend you get issue 5 and share my high hopes.

Content: Clear, friendly, unpretentious. 85% Appearance: Clean, acceptable, on the up. 70%

Overall: 85%

#### Bonzo's NEXT Scrapyard MONTH: Bonzo's Scrapyard (see What's happening, page 3) and the Bette than life disczin from AA contributor. Richard Fairburst.

#### DTP - a practical guide

If you enjoyed Angela Cooke's review of MicroDesign and devoured Andrew Chapman's key to spotting printed material produced using desktop publishing (AA116) you'll already have read Richard Fairhurst's advice in our main feature this month (see page 11). Indeed you are probably just about to run out to get yourself a shiny new DTP package to run on your CPC! However, If you're planning to produce a fanzine with it, you need more than

The beauty of fanzines is that they can survive on a small, special interest, readership The point? You don't have to please the entire CPC user base in each issue. You could, for instance, produce a magazine aimed at general users; fill your pages with PD reviews; give advice to beginners or talk about old computer games (Digital Press-style).

Try to cover everything, though, and you won't have the time, energy or space to go into much detail on each subject, and you'll be wasting your talents. Don't be afraid to just rave about PD from cover to cover, as you'll have produced an excellent PD review fanzine with a readership which loves PD.

#### **NEXT MONTH:**

Simon Forrester starts a miss-it-at-vourperil series on producing a fanzine. If you want to get something into print and make it look professional don't forego this opportunity to learn from a pro!

**CLIP ART Ready-made** 

column of text are both

on to a page.

pictures which you can load

JUSTIFICATION Adding extra

space between words so that

the left and right margins of a

#### **Typing listings**

- Type in exactly what we print.
- OMIT the first four letters in each line.
- Only press RETURN when you get to the end of a command line. If a command line goes on to two lines don't press RETURN at the break. Your lines on screen should break in the same place as those in the mag.
- The dots you see in some lines (like the one between 'well' and 'done' in the line PRINT| Well-done| ) indicate spaces. The number of dots tells you how many spaces.

#### **TypeChecker**

This program enables you to check whether you've typed AA listings in correctly. Type it in, then SAVE it for future use. When you want to doublecheck that you typed a listing in correctly:

- load up TypeChecker;
- type NEW;
- type in the listing of your choice;
- when you have finished type LIST. At the end of every line a highlighted code

appears. It should be the same as the code printed in front of the same line in AA. If it isn't you have typed that line incorrectly. PAML 10 . TypeChecker . V1.0 . - . By . Simon . Forrest

POKE &BB5B,0 turns it off, while, POKE &BB5B,3 turns it back on.

#### Fine tune last month's 'catch the block with your bigger block' to produce a classic gaming experience, with Richard Fairhurst.

How do you get an on-screen score which is constantly updated? You are using the, extremely slow, standard firmware routine (&BB5A), to print the score, so adding the score-printing routine (Id a,(score): call pr\_a) to the main loop of the program slows it by a ridiculous amount. Because the score only changes when a new ball is launched from the top of the screen you can locate the score-printing routine in this part of the program, where speed of operation isn't so critical. So, delete the original score-printing code from the program's quit routine. and add a call pr\_a immediately after the score is updated (ld a,(score): inc a: ld (score),a).

Theoretically, this is no problem but a couple of aspects of the program's operation conflict with this. 1 The score first appears as 000, then 000001, then 000001002, because you're not resetting the cursor position so the score is printed in the same location every time. To fix this place the machine code equivalent of a LOCATE command - ld h.1: ld I,1: call &BB75 to locate at (1,1) - before the score is printed. Put this before the score is updated. 2 If the ball comes down on the left-hand side of the screen it wipes out the score as it falls. So change the cp 2 after call random (at the .retry label) to a cp 8, so the program rejects any ball position which would wipe out the score.

#### Sound it out

You now have professional-quality code and graphics but no soundtrack. However, if you have a soundtrack-generating program here's your moment. (BooTracker users have to shift package to use their music in a game such as this: it uses the firmware sound routines which won't work in your game because... you've turned the firmware interrupts off.)

Other packages work by generating sound every 1/50 second: perfect, as your game is timed in the same way. To add sound you add a CALL to the main game loop. If the music is located at &4000, the CALL is probably to &4003, but this depends on the package. In addition, you need a CALL &4000 to initialise the music at the start of the program, and a CALL &4006 to shut it up before quitting.

#### **Bounce** your ideas

Your game can't really play any faster so how about making the bat continue in the direction you send it in and bouncing off the 'walls' for good measure?

You need to set up a new variable to do this. Add .btdir dw 0 to the variables section, with btdir standing for 'bat direction'. This initially is 0, so that

the bat doesn't move until a key is pressed. Later it contains +2 for a bat moving right, and -2 for a bat moving left. You can simplify the left and right routines, then, to simply set this variable:

Id hl,&FFFE: Id (btdir),hl: ret .right ld hl,2: ld (btdir),hl: ret

The Z80 can't handle negative numbers as such, but &FFFE is equivalent to -2. So, if the bat position is 34, adding &10000 to it would (if the Z80 could cope with such large numbers) result in &10022. As the Z80 can only handle 16-bit numbers (four-digit hex), the result 'wraps round' to &0022 - or 34 again, so it follows that to subtract 2, you can add &10000 minus 2, which is &FFFE.

#### Get it right (or left)

Finally, you need to add code to move the bat right or left and bounce it when it hits a wall. Add this simple code to the start of the .bat sub-routine:

ld de,(btdir)

ld a.(btcol): add e

ld (btcol).a

ld hl,(btaddr): add hl.de

ld (btaddr).hl

or a : jp z,revers

cp 70: ip z.revers

This calls another routine to 'bounce', or reverse, the bat's direction. Now change 2 to -2, and vice versa and add this routine (after any sub-routine):

revers Id hl.(btdir)

ld a,h: cpl: ld h,a

Id a,I: neg: Id I,a

ld (btdir).hl

jp bat

CPL inverts each bit of the byte in A, and NEG takes it from 0. Using your knowledge of binary, see if you can work out how this changes between 2 and -2.

#### Track them down

Soundtrakker – try the AA reader ads, page 9. ChaRleyTraCker - coming soon from Robot PD, 2 Trent Road, Oakham, Rutland LE15 6HF. Equinoxe – try the AA reader ads, page 9. Soundhakker Pro – try AA reader ads, page 9. BooTracker - covertape Amstrad Action, issue 92. May 1993.

#### **NEXT MONTH:**

Start on a proper maze-type arcade game. So begin planning those screens now...!

#### Richard Wildev barks the orders and watches how the Parados ROM responds. Attentionnnnn!

he Parados ROM has been around for a while out as the original review was over a year ago (AA99, page 55) it seems a re-review is necessary. This is because some people still haven't got the message that Parados is *the* large format operating system you should get.

#### Simply the best

No matter what system, if any, you are using, Parados will no doubt replace it with its ability to recognise 22 different formats, including RomDOS, MS800 and SDOS discs. It doesn't, however. recognise RoDOS discs, but then again not much does. Another incompatibility is that Parados doesn't work under CP/M Plus but does work under CP/M 2.2. You can, of course, use standard Data format discs under both. As well as acknowledging this myriad of formats from your initial CPC boot-up, you can read, write to and format across them.

#### A stranger in Parados?

Initially Parados is transparent to the user, taking up only six bytes in memory, until you issue an RSX to bring up the Parados disc utility. This is split into two windows with a pop-up menu running along the bottom row. The filename window takes up a large proportion of the screen. To the right of this is the information box, telling you what format your logged

disc is, how many K are available on it and so on.

This utility lets you perform just about every except that there's no exit - you have to reset the computer to quit.

You have two o disc and.

file options. each accessible from access one you have to

hold down [SHIFT], the other [CONTROL]. At first the keypresses seem a bit fiddly but you soon get used to them

In the disc menu the main options are

- Format,
- Verify,Configure and,
- o Log.

They do what you would expect. An important mentioned in the instruction manual, is that you can set up Parados to read the second side of a 3.5-inch disc. This side switching is useful if you get a disc from a user who has a side switch when you don't.

#### Go backwards to format

The menu bar along the bottom shows a backup option which, in fact, was never implemented. You

Parados: software side switching is one of the, useful, options.

can format discs quickly - and backwards!

Backwards formatting is a clever feature which is rarely used by other such disc utilities. This is where counts down to 0 which means that the directory of the disc is the last thing to be wiped.

#### All is not lost

Backwards formatting means that if you suddenly realise that you are formatting the wrong disc, which happens all too often, you only lose the last few tracks. If the disc were not full all the files might still be intact, and at worst some should still be there. done with this facility. There is nothing worse than realising you are formatting the disc in drive A

Parados: it's the CPC disc operating system par excellence.

#### Filling in the format

With 22 different formats on offer which do you choose? You should format 3-inch discs to the standard Data Format to ensure compatibility with other machines. Though, if you are the only person who uses the disc, then you can use one of the special Parados formats that gives you 203K on one side of a 3-inch disc.

Parados also provides compatibility for Ultraform an old Amstrad Action Type-in that also gives you 203K on a side.

It's on the 3.5-inch discs that Parados really comes into its own. Double-sided 80 track formats are those with the potential for more than 700K on one disc. Six of these are on offer, the most reliable of which is RomDOS D1 which gives you 716K and a possible 128 directory entries.

# otal entries : 84

#### Parados: all users are displayed at once.

instead of B just after you have seen the track number move up past 1.

#### Looking at the menu

In the files menu you have the power to:

Change file attributes;

- Rename;
- Erase and;
- Move a file to a different user area.

A header reader would have been a nice addition. In the main window the files are spread in

Parados supports 22 different formats.

columns of three each with 20 rows. To select a file

you must use the up and down cursor keys. If there

are more than 20 and the next column is already in

use you cannot use the left and right keys to jump

regardless of the user number or whether files are

hidden or not. You can set Parados to read a single

user if, in the unlikely event, you have very organised

disc structures. You can, however, set this figure to

229 to view all the erased files on a disc, which you

Play tag and win!
To Copy, Rename, Erase or Change the attributes of

onto the next page. The names are displayed

On discs with more than 60 files you can scroll

across which is rather annoying.

the move option.

100K free memory for the buffer, it varies with the number of files on the logged disc. You may think that this is plenty but if you are lucky enough to own a silicon disc or any extra memory Parados recognises up to 576K which gives you a 550K buffer. This buffering minimises disc swapping and speeds up copying when you are transferring files.

#### To sum up

both powerful and apparently bug-free, but it does have a couple of irritating features. These to get you should now be convinced that there is only one worth considering.

If, on the other hand, you've already got an operating system, is it worth upgrading to Parados?

you have the previous king of operating systems, RomDOS, (the original RomDOS, that is, not the bugged RomDOS XL).

essential utility for RomDOS. after all what other

Get the top CPC operating system free - win a Parados ROM worth £14.99! Simply tell us who wrote Paradise Lost and get your answers on a postcard or on the back-of-an-envelope to us by Friday, 30 June 1995 at Paranoid, Amstrad Action, 30 Monmouth Street, Bath, Avon BA1 2BW, or e-mail us at aa@futurenet.co.uk.

## **Complete compatibility**

Parados sits quite happily in any ROM slot in complete compatibility with other software.

discs with Stop Press, Art Studio, and all those other programs that wouldn't normally work. However, you can't use it with CP/M Plus as this uses all its own disc routines.

In the older 6128 and 664 machines the AmsDOS chip (40015) is in a socket and you can gently prise it out with a screwdriver and pop Parados in in its place. On later 6128s this Amsdos chip was machine soldered to the motherboard. Replacement should therefore only be performed by anyone with extremely competent soldering skills - this is definitely not something you should attempt if you are a novice as you could easily write off

For once 464 owners have an advantage as the AmsDOS ROM inside the DD-1 interface is in a ROM socket so you can replace it with ease. The only drawback of installing Parados directly into you CPC is that you can no longer use DR LOGO 3 under CP/M as part of this program is stored on the AmsDOS ROM.

#### Parados regained

Product: ParaDOS Price: £14.99 (ROM only) Supplier: CampurSoft, 10 McIntosh Court, Wellpark, Glasgow G31 2HW = 0141 554 4735/fax 0141 227 4486.

a RomDOS disc to an MS800 disc all in one fell swoon?

So, throw away MScopy, MaxiDOS, RomDOS and all associated programs and let Parados do the lot for you in one package.

a ROMboard though you can use Parados as a complete replacement for AmsDOS, the original disc operating system inside your CPC. This not only saves a space in your ROMboard but, more importantly, gives you

This means you can use your large format

#### Hackit: the graphical memory dump.

Hackit is a foreground ROM so it initialises before BASIC, or any other ROM, should you want it to. There is an on and off switch so it's completely out of the way when you don't need it.

#### What's the use?

Hackit has many uses:

- it is an excellent software development tool;
- it's pretty useful for hunting down pokes for infinite lives in games, and,
- you can use it to, er, examine, not copy of course, other people's code:
- With Hackit you can break into a program while it's running and do such helpful things as:
- disassemble to the screen or disc: edit the memory, search for values;
- save areas of code.

Hackit also has many other practical features. For example, it also includes an assembler. This is notoriously user-unfriendly but it does its job. For example, with the Multiface you can CALL directly, but if you use Hackit. once you have broken into a program you cannot return unless you know the memory address at

#### Hackit v the Multiface

which you stopped it.

People are often under the misconception that Hackit is similar to the Multiface, but, in fact, the two are not really comparable. The Multiface gives you basic memory

View the memory as HEX and ASCII.

editing features whereas Hackit is a specialised tool for serious users with a knowledge of assembly language.

So why do you

need Hackit?

Hackit is a one-slot romboard with many uses. Could it be

what you're looking for? Richard Wildey helps you decide.

Hackit can also help you advance your understanding of machine code as you can disassemble other people's programs to find out what makes them tick. Don't always take what Hackit tells you as gospel, though, because, undocumented op codes fool it and cause it to stop disassembling.

Hackit doesn't like indirect addressing, thinking mnemonics such as LD HL,(&2033) are LD HL.&2033, in fact, Hackit has been known to make up op codes of its own! However if it's only your own programs that

you're looking at, and you stick purely to programming legal commands, Hackit should have no problems.

#### Open wide and say 'ah!'

If your program has crashed you can dive in and examine the memory to check everything is in order. You could also try forcing it out of a situation by calling sub-routines directly with parameters that Hackit lets you set up.

Other features within Hackit are:

- a header reader:
- hexadecimal to decimal converter:
- the ability to fill and move code, and,

Disassemble to the screen, printer or disc.

 the ability to perform IN and OUT operations. All in all Hackit is an excellent piece of

hardware but it is let down by poor software. The assembler is awful to use but the dissembler certainly makes a programmer's life a lot easier.

All the commands which are available.

#### Where to go

Unfortunately, Siren Software no longer make Hackit so it's time to trawl those AA reader ads again, or place your own, see page 9. Clubs such as WACCI and UAUG (see the Amscene Directory on the covertage for club contact details) may also be able to help you out if you do want to get a copy of Hackit.

There are several versions of Hackit, but those beyond Version 4 have the assembler and are reputed to contain fewer bugs. There are also some French versions floating around so make sure what you know what you're getting. Hackit originally retailed at £35 but was reduced to £25 so don't pay much more, if any, than this.

#### **Recovery positions**

Hackit is handy if your computer crashes and you are in danger of losing hours of work. Assuming the computer has just 'hung', rather than reset, you can jump into Hackit, enter [D] to initialise AmsDOS then input [S] with your chosen filename to save. Then pick the relevant addresses from those in the box, use the same address for Entry and Load as the given start address, and then you should find that the panic should be over. Where the length of code varies use the graphical memory dump ([M]) to find the end then fine tune this figure with the memory editor.

ogram	Start	Length	Additional information
otext (ROM/disc)	&172	Unknown	Save as Binary
xam (ROM/disc)	&170	Unknown	Save as Binary
P Art Studio	&4000	&4000	Change to Bank 2
SS clipboard	&4000	&4000	Change to Bank 4

AA116, (Designs on layout,

"If you have MicroDesign and use it a lot then MicroDesign Extra is an almost essential piece of software. However, if you don't use MicroDesign much, and then only to play around with while you are trying to work out how to use it, don't bother buying MicroDesign Extra. But, if you fall into the latter category, then you are really not getting

And Angela should know because, in the same article, she confesses:

"I used to use MicroDesign for designing front pages, newspapers and reports in connection with my homework when I was still at school."

Angela finds that MicroDesign Extra enhances the versatility of MicroDesign. So, if you are into design or need to layout almost any kind of document, and have, or are thinking about buying, MicroDesign you need MicroDesign Extra. So, if you agree, why not take up this opportunity to win a copy? Remember, we have three copies up for grabs.

Simply answer the question which follows,

then send your answer on a postcard or on the back-of-an-envelope to:

It's a pig of a question. Amstrad Action. 30 Monmouth Street, Bath, Avon BA1 2BW or e-mail it to aa@futurenet.co.uk before Friday. 30 June 1995.

And the question is:

Accommonwed the second

What was the original name of the original company that produced the original MicroDesign?\*

\*Clue: look in the MicroDesign Extra review in AA116.

# Orum

AA's resident archivist **Richard Fairhurst returns** with a hardware project from the past and also answers some of your more up-to-date questions.

#### QUESTIONS AND ANSWERS

**Colour dumped** recently got the Citizen ABC-24 colour printer and the OCP Advanced Art Studio for my 464. I have used different colours in my pictures but when I print them out they only print in black and white. And yes, I do have a colour ribbon.

Please tell me how to print in colour. Paul Walker, Harrogate

Advanced Art Studio's built-in print routine s only for black and white printers affordable colour printing is a relatively recent development and OCP is an old program! However, two commercial programs print

Colourdump 3

pictures in colour ColourDump 3 from OJ Software, 273 Mossy Lea Road, Wrightington. WN6 9RN the slower,

Nr Wigan, Lancs **☎** 01257 421915), price £15.95, and printer driver from Datel Electronics. Govan Road, Fenton Industrial Estate.

Fenton, Stoke-on-Trent ST4 2RS \$\infty\$ 01782 744707, price £19.99. Both programs are on disc only

However, a word of warning... Both programs are designed for Star colour printers. If - as is highly likely - your Citizen doesn't use the same codes (of the form ((C)) to set a colour), you need to ask a friendly hacker to tweak the program, or give up on printing pictures in colour altogether.

Check your printer manual!

Pin-head Can you tell me a firm which supply a plug-on side switch for my 3.5-inch disc drive? Avatar doesn't seem to be supplying them now or, at least, not for me they sent my money back. Derrick Frost, Northampton

Sadly, no other CPC firm ever supplied plug-on side switch units. However, it is relatively easy to add a (nonplug-on) side switch yourself. If you're not happy with a soldering iron try giving the following instructions to a bod at your local electronics shop...

Look for a 34-wire cable connecting your CPC to the 3.5-inch disc drive. The red wire on one side connects to pin 1, the wire furthest from it connects to pin 34. So, by counting between them, locate the cable which connects to pin 32

Now whip out your soldering iron and connect a switch (SPDT, meaning, single pole, double throw) between this and one of the cables immediately next to it. In other words, I mean pin 31 or pin 33, which

Now use this switch to flip between side 0 and side 1, to use RomDOS or ParaDOS double-sided formats, set it to side 0.

That should do it!

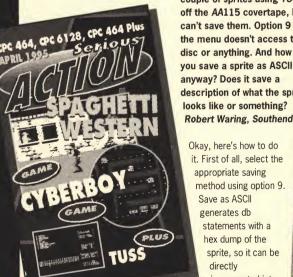

Disappearing acts: first the software company, then the game?

Evaporated disc
I do not know if others have had this

problem, but perhaps you can help. I have two Infogrames disc games (Teenage Queen and Captain Blood), both of which have evaporated off the discs. These have been stored with other discs which are still okay.

How do I go about replacing my games as the company, which used to advertise in AA, has disappeared. I am now worried about Sim City, produced by the same company: on side

#### Covertape clinic

I've managed to capture a couple of sprites using TUSS off the AA115 covertape, but I can't save them. Option 9 from the menu doesn't access the disc or anything. And how can you save a sprite as ASCII anyway? Does it save a description of what the sprite looks like or something?

Save our

sprites

Okay here's how to do it. First of all, select the appropriate saving method using option 9 Save as ASCII generates db statements with a hex dump of the sprite, so it can be directly incorporated into

assembly language source

this option to enter the filename to save the sprite under.

Now, return to the sprite display screen, and press COPY. You can then use the cursor keys to wipe any rubbish you don't want saved off the screen. Finally, press COPY again, and the sprite is saved to disc.

The full (and rather hefty) TUSS manual is available from the original authors of the program. Sentinel Software, priced £2 **☎** 0181 876 7032.

Do anything you wanna do: save code. You should also use sprites using TUSS and option 9.

#### Spelling checker blues

I can't get PowerSpell to work on my computer - a 464 with 3.5-inch disc drive.

Is there an error in the program, or do I need a memory expansion? Sally Tomlinson, Salford

The latter, I'm afraid. PowerSpell has a 48K dictionary, and because the 464 only has 39K available for programs (the rest is taken up by the firmware and screen memory), there's no way it will work on the oldest Amstrad.

Getting hold of a memory expansion, too, could be tricky now that Datel are no longer supplying them, so it's back to trying the AA classifieds section on page 9. But, because PowerSpell uses its own bank-switching routines (rather than relying on the 6128-only Bank Manager), you can run it without problems should you purchase a 64K expansion.

Don't back off, back up. But no need to exert yourself - Xexor will back up most discs for you.

A, I have ADH.BIN (15k), ADL.BIN (40k), DISC. (1K) and nothing on side B.

Does this seem right? G Haves, London

I doubt you need to worry about Sim City in particular. The 1K file is the loader, the 15K file the loading screen, and the 40K file the main code – all perfectly above board. Side B of disc games is usually blank, too.

TOP TIPS

Hardware to port...!

By popular demand, this month's Top tips presents a project to build an A38. We could have reprinted another project which graced the pages of an even older copy of AA, but the, by far the more professional, design of this one bears repeating. (If you want to build the other project it worked by routing the cassette motor on/off signal to bit 8 of the printer. This is fine if you can stand a 'click' every time you want to print a character above 127, but it's a little tatty!)

If you're not confident with a soldering iron, or you don't know what IC stands for, get someone else to assemble the project for you. Attempting to build a hardware project where you are not quite sure what you are doing is a sure-fire way to damage your printer, your CPC, and various parts of your anatomy.

Map-lin it out. You can build an A38.

You might like to try backing up your disc as a first disc drive for my 464? games and storing the backups in a safe place. to prevent future catastrophes.

The best program currently available for such a job is Richard Wilson's Xexor (from Sentinel Software, 41 Enmore Gardens, East Sheen, London SW14 8RF. cs94rrw@brunel.ac.uk, £14.99). Although it won't back up all games it can cope with more software than any other copier.

Are you, by any chance, storing your discs near a magnetic field of any type, as produced by monitors, power supplies, TVs, speakers and such like? This could be the source of your problems.

Alternatively, it could be that someone might merely be trying to prevent you playing vile and depraved software such as Teenage Queen...

Insane in the membrane

I have a 664 with a damaged keyboard membrane, and I am having difficulty finding a

connector on the CPC:

And if so, how? W Gilhespy, Aylesbury

If you haven't done so already, CPC PLC are the people to contact for all your replacement Amstrad parts (CPC PLC. Component House, Faraday Drive, Fulwood, Preston PR2 4PP & 01772 654477).

You could also try the AA classifieds on page 9. You might find that someone, somewhere, has a dead 664, with a perfectly decent keyboard that he or she is willing to get rid of. (Having said this, though, I must admit that keyboard failure is probably the most common fault with 664s!)

Disc drive mechanisms are pretty much the same on all CPCs, but, sadly, there's more to a 464 'first drive' than just the actual disc drive itself.

The CPC 464 doesn't have any circuitry to control the disc drive, or even an AmsDOS ROM, This is why a first drive for the 464 originally cost £160, whereas a second drive was priced at a much more reasonable (ahem) £100. Again, your best bet is to try the AA classifieds to see if anyone is offering the working part of a DDI-1 which has partially broken down.

addition, there's the necessary strobe output (used to tell the printer that a new character has been sent) and 'busy' input. Theoretically, then, you could connect two printers to your CPC at once, one off each port, although why you should want to do so is a different matter...

To let software (including BASIC) use the new port, you need to type in a short listing that redirects the firmware print routine to use I/O addresses &FBF9 (the new data port) and &FBF8 (the strobe/busy port).

Here's a simple listing to do the job.

100 MEMORY &9FFF 110 FOR n=&A000 TO &A058 120 READ a\$: POKE n, VAL(\_&| +a\$) 130 NEXT: CALL &A000 140 DATA 3E.C3.21.28.BD.11.00.A0 150 DATA CD,52,A0,11,27,A0,CD,52 160 DATA A0,11,2D,A0,CD,52,A0,11 170 DATA 37,A0,CD,52,A0,21,F1,BD 180 DATA 11.43.A0.CD.52.A0.C9.C5 190 DATA CD.43.A0.C1.C9.C5.01.F8 200 DATA FB,ED,48,CB,41,C1,C9,C5 210 DATA 01,F9,FB,ED,79,0B,ED,79 220 DATA C1,37,C9,01,32,00,CD,2D 230 DATA A0,20,EC,10,F9,0D,20,F6

240 DATA B7,C9,77,23,73,23,72,23,C9

Note, however, that any software that reinitialises the firmware or uses its own print routine which, incidentally, includes anything which is CP/M-based - needs to be hacked severely before it can use the new facilities.

The port also requires:

• three R1/2/4 4K7 Ohm resistors;

• an R3 150 Ohm resistor; and a

C1 1 5F capacitor;

 a Vero-Q stripboard, although difficult to get hold of, is ideal for mounting the whole project on, thanks to its 'IC-ready' etchings. And finally, • the wire! Wire wrap, which is thinner than the normal stuff, makes fine electronics work such as this a good deal easier.

**Hard facts** 

The project sits on the expansion port of your CPC, rather than on the printer port, and implements a whole new 8-bit data port. In

#### **NEXT MONTH:**

For probably the first time, Techy Forum, presents a, sort of, 'Next month' box! (AA readers faint all over Britain.)

Due to space restrictions, you'll have to wait another four weeks for information on how to put the port together. Sorry. However, if the amount of mail we've received on this subject is anything to go by, Maplin needs to stock up on parts...

Mrs P J Hughes

Beauford Court, 30 Monmouth Street, Bath, Avon, BA1 2BW Telephone: 0225 442244 Fax: 0225 467465

8th June 1995

Dear Mrs P J Hughes

#### Important News for all Subscribers!

It is with extreme sadness that I write to you with news of the closure of Amstrad Action. Unfortunately the number of copies sold of Amstrad Action is no longer sufficient to keep it running. The issue you have in your hands is the last issue of Amstrad Action to be published.

As Publisher of Amstrad Action, may I take this opportunity to thank you for supporting the magazine. You know, Amstrad Action was Future Publishing's first magazine and so the news of the closure will be mean a lot of downturned faces at Future Publishing for many of the old faces at Future started out on Amstrad Action; you may remember previous Editors like Rod Lawton, Steve Carey, Dave Golder who are still at Future many years on! It was not an easy decision to have to close the magazine, but I am afraid it was unavoidable and we are all as sorry here as I am sure you will be. You won't be totally alone though, so do try and call one of the Amstrad CPC User Groups to maintain your CPC contacts, you'll find their details in previous issues of AA.

In the 10 years since that first issue of Amstrad Action, Future Publishing has grown to over 400 staff and 30 titles and it seems to me an obvious step and somehow a link with the past, to offer now to all of our loyal Amstrad Action subscribers (this means you!) an opportunity to find a substitute for Amstrad Action, since you do have 2 issues of your subscription still to run. We would like to offer you the chance to have the remaining issues of your subscription moved across to one of the following magazines at no extra charge:

Amiga Format - the world's top-selling general interest Amiga magazine Amiga Shopper - the techie magazine for Amiga users Amiga Power - for all Amiga games players ST Format - the number one Atari ST magazine Total - the number one Nintendo magazine Superplay - the independent SuperNintendo magazine Sega Power - for users of all Sega games machines Gamesmaster - Britain's biggest selling games magazine Ultimate Future Games - for the next generation of games players Edge - the exlusive magazine for experienced games players CD ROM Today - market leader for all that's new in PC CD-ROM Future Music - making music with technology (comes with CD-ROM) MacFormat - the general interest Mac magazine (CD-ROM) .net - the Internet magazine PC Answers - to get the most out of your home PC (CD-ROM) PC Attack - for young PC games players (CD-ROM) PC Gamer - for slightly older PC games players! (CD-ROM) PC Format - the best-selling general interest PC magazine (CD-ROM) PC Guide - great advice for your home PC-without the jargon (CD-ROM) PC Plus - the comlete PC user's magazine (CD-ROM)

Registered Office Future Publishing Limited Beauford Court, 30 Monmouth Street, Bath, Avon BA1 2BW Tel: 0225 442244 Fax: 0225 446019 Registered Number 2008885 England

PCW Plus - the only magazine for Amstrad PCW users

SFX - the all new science fiction monthly Classic CD - all that's best in classical music and a great CD Mountain Biking UK - the number one enthusiasts' magazine Cycling Plus - for the really serious cyclist MTB Pro - 100% mountain biking Total Guitar - everything about guitars and playing them and a CD Cross Stitcher - the market leading cross stitching magazine Needlecraft - the number one stitchers' magazine Good Woodworking - practical tips and essential advice Total Football - the great new footy mag for the real fan (launches Aug 8)

Now there must be something there for you! All you need to do is fill the form in attached and send it back to our Freepost address and we'll do the rest or phone our subscriptions hotline (01225 822511). If there's nothing of interest here and you don't want to receive any of the other magazines then phone the hotline and we'll refund you for all unmailed copies. Can't say fairer than that can we?

And in the meantime, while you are thinking about which magazine to move to, may I thank you once again for your support of Amstrad Action.

Yours sincerely

Simon Stansfield
